

Enterprise Java Solutions
with IBM WebSphere

J2EE is revolutionizing the way the server-side business solutions are built and made to play with the web. It provides a standard for simplifying complex business problems with the development, deployment, and management of multi-tier enterprise solutions.

With the addition of J2EE-based technologies, which are supported by the Java community at large, Java technology is a viable choice for developing solutions of varying deployment topologies, platform requirements, and business needs.

WebSphere Advantage

From our perspective, running on WebSphere is all about ROI, having a scalable solution for virtually any need and availability around the clock in a dynamic and challenging business environment. Developing with WebSphere is the key for time-to-market and using an organization's existing system and data assets in combination with the most recent technologies. Providing our own developers with the WebSphere toolset to work with, keeps them highly motivated and productive.

WebSphere Application Server, along with WebSphere Studio Application Developer is the solution representing the most productive environment, allowing developers to build and fully test a J2EE application, from the presentation part down to the most critical components like EJBs, Web Services or message-driven beans.

Cordiant Offering

Cordiant has the experience and expertise to partner with you in designing, developing and deploying best-in-class J2EE Solutions using WebSphere, the leading software platform for on demand business.

Cordiant is an IBM Business Partner. Our partnership with IBM is a reflection of our commitment to expose our developers to the latest IBM products and technologies so that we can continue to deliver state-of-the-art e-business solutions to our valued clients. Our WebSphere expertise spans various versions of WebSphere Application Server and development environment like WebSphere Studio Application Developer.

In addition to working with IBM WebSphere, Cordiant also has experience working with BEA WebLogic, Apache Tomcat and JBoss Enterprise Application Servers. We are one among the few companies in the world to use IBM Rational Rapid Developer for an open source J2EE based solution using Model Driven Architecture (MDA).

Value Proposition

Cordiant stands as an obvious choice for software vendors who wish to harness *the power of Outsourcing*. Our offshore teams perform as a veritable extension of our clients' development teams, working in tandem and total sync, leveraging the 24/7 development cycle.

By choosing Cordiant as your *offshore partner* for developing robust J2EE solutions, you have the liberty to define the relationship model that best serves your unique business requirements. We have a proven development methodology in place which is carefully crafted to give our clients the advantages of offshore cost savings, world-class quality and speed-to-market.

With a dedicated team of developers having vast J2EE/ WebSphere experience, Cordiant is ideally placed to leverage the J2EE framework to deliver next generation eBusiness solutions.

"I just wanted to take a minute and let you know that the development and quality assurance resources on your side have been doing a great job. We've been very happy with the work they have done and I'm looking forward to the continued relationship in the future. Congratulations on putting together such a fine team!"

-COO of a market-leading Sarbanes Oxley solutions vendor

At Cordiant, we have considerable experience in building enterprise solutions to clients from various domain areas like Financial Services, Corporate Compliance-SOX, Travel and Leisure, Inventory Management, E-Procurement, Spend Management and Human Resources.

We have an established infrastructure for offshore delivery. Our development centers in Kochi and the International Technology Park, Chennai demonstrate our commitment to invest in infrastructure. Our strong quality policies and procedures take care of our clients' Intellectual Property concerns.

With our broad experience in J2EE development, we can help you build, manage and grow successful e-business Solutions that enable rapid response to change and short term return on investment.

We have been offering our J2EE experience and expertise to a market leading Sarbanes Oxley Compliance vendor having Fortune 500 customers. We have delivered an open source J2EE based content Management application using the emerging MDA RAD methodology, to an Industry association.
